Stainless Steel Mechanical Dial Scale

Yamato

The Accu-Weigh® SKY series of stainless steel dial scales are made exclusively for environments found in professional kitchens and meat processing plants. SKY Series scales are ideal for portion control and recipe formulation. The outer housing is constructed from stainless steel with all other components made from corrosion resistant materials. The strong platform base has two supports and mechanical overload stops. The dial is made from clear shatterproof plastic and features a rotating chart for quick taring of empty containers or to tare after each ingredient of a recipe is weighed. The 6" diameter dial is slanted 30 degrees to eliminate the need to stoop or bend down to get accurate weight readings. Black graduations on a white background are clearly marked for the fastest possible weight determination. The lightweight, balanced indicator further enhances speedy and accurate readings.
